OUR MISSION

- To make Jaslok Hospital the most respected medical institution of India.
- Providing the highest quality patient care.
- Nurturing and delivering clinical excellence and research.
- Doing charity to humanity irrespective of caste, race or denominations.

OUR VISION

To be the hospital of choice for patients, physicians and employees by providing state-of-the-art medical care with compassion and dignity.

LIFETIME OF CARE

A lifetime of care is as much about our 50 years history as it is about the next 50 and many more years. At its core it is the power of providing the highest quality patient care delivered through well-trained team, cutting-edge technology, research, all with a human touch. To summarise, it is a lifelong commitment from each and every 'Jaslokian' hence a Jaslokian's work is never finished.

Exceptional Cases

JASLOK HOSPITAL DOCTORS SUCCESSFULLY REMOVE LED BULB FROM CHILD'S LUNG AFTER THREE-MONTH MYSTERY

Mumbai, 09th September 2025:

In a rare and extraordinary medical case, doctors at Jaslok Hospital & Research Centre successfully removed a metal LED bulb lodged in the lung of a 3.5-year-old child, putting an end to a three-month-long struggle with persistent cough and respiratory distress. The child, Rahul (name changed for privacy), had been suffering from what was initially diagnosed as pneumonia and was treated with multiple courses of antibiotics. Despite extensive care, his symptoms persisted, prompting advanced investigations, including a CT scan, which revealed a metallic foreign body lodged deep in the left bronchus.

Dr Divya Prabhat, Dr Vimesh Rajput, Dr Anurag Jain,
Master Aarav-Patient

Following unsuccessful attempts at flexible bronchoscopy in Kolhapur, the child was referred to Jaslok Hospital, where a rigid bronchoscopy revealed the embedded foreign object and a severely narrowed bronchus. A mini thoracotomy (4cm cut) was then performed by Dr. Vimesh Rajput and Dr. Divya Prabhat, successfully removing the object — an LED bulb from a toy car — and restoring the child's lung function. The surgery was well-supported by Dr Anurag Jain, Consultant Anaesthesiology.

Speaking about the case, Dr. Vimesh Rajput, Thoracic Surgeon at Jaslok Hospital, said, "This was one of the rarest cases we've encountered. The LED bulb had become embedded in the lung tissue, and conventional methods failed to retrieve it. Through a carefully planned mini thoracotomy, we were able to safely remove the foreign body and restore the child's breathing."

Dr. Divya Prabhat, ENT Surgeon, added, "Unexplained and persistent respiratory symptoms in children should never be overlooked. Cases like these often-mimic pneumonia or other common conditions, leading to delays in diagnosis. Early detection through advanced imaging can significantly improve outcomes and prevent complications."

Emphasizing the importance of awareness, Dr. Milind Khadke, Chief Medical Officer, said, "Foreign body aspiration in children is more common than most parents realize. Timely medical attention and specialist intervention are crucial in preventing long-term damage to the lungs. This case is a reminder for parents and healthcare providers to be alert when children present with chronic, unexplained respiratory problems. Also a request to all parents to be extra careful about the condition and type of toys your children are playing with"

Expressing his gratitude, Avinash Kadam, father of the child, said, "Words cannot express how relieved we feel. For three long months, we were living in constant fear, not knowing what was wrong with our son. Thanks to the incredible team at Jaslok Hospital, Aarav is now breathing freely and smiling again. This hospital has given our child a new life, and we will remain forever grateful."

This case highlights the importance of early diagnosis, advanced imaging, and specialist intervention in managing complex paediatric respiratory cases. Jaslok Hospital continues to uphold its reputation for excellence in patient care and advanced surgical expertise, ensuring successful outcomes even in the most challenging cases.

Exceptional Cases

JASLOK HOSPITAL SAVES HIGH-RISK PATIENT AFTER LIFE-THREATENING POST-OPERATIVE COMPLICATIONS

Mumbai, XX September 2025: Jaslok Hospital and Research Centre has successfully treated a 49-year-old woman, Mrs. Rekha Mehta (name changed), who developed severe, life-threatening complications following bariatric surgery. Referred in a critical condition, her case was managed through a timely, coordinated decision by Jaslok's multidisciplinary team to perform a high-risk corrective surgery. In today's times, the importance of such hospitals has grown immensely, as patients often face multiple complex problems that demand immediate and combined expertise.

In February 2025, the patient underwent bariatric surgery in Ahmedabad. Three months later, she developed severe complications and was admitted to two different hospitals in Navi Mumbai for emergency care, where she underwent emergency laparotomy (abdominal surgery to open and examine the abdomen) for a perforated gastro-jejunosomy ulcer (a hole at the stomach-small intestine connection). Her recovery was further complicated by acute kidney injury (sudden kidney failure) and a cardiac arrest (heart stopped beating).

Despite aggressive treatment, her condition worsened with gastric leaks (stomach contents leaking out), wound dehiscence (surgical wound reopening), and respiratory distress (difficulty in breathing). In desperation, her family contacted Dr. Sanjay Borude for help. Recognising the gravity of her condition, Dr. Borude advised an urgent transfer to Jaslok

By the time she arrived in May 2025, the patient required BIPAP (non-invasive breathing support), high-flow nasal cannula (oxygen delivery system), and intensive monitoring. A multidisciplinary team led by Dr. Pinak Pandya, Chief Intensivist, stabilised her with targeted antibiotics, thyroid management, nutrition support, and wound care.

Once her condition improved, surgery was performed under the leadership of Dr. Sanjay Borude, supported by Dr. Rahul Borude and Dr. Jaydeep Palep, with anaesthesia care by Dr. Purna Gomes, Additional Director Anaesthesiology. Intra-operatively, the team found a plastered abdomen with adhesions (organs stuck together), pus pockets (infection collection), and a gastric perforation (hole in stomach). Under Dr. Borude's direction, the perforation was meticulously repaired, reinforced with omentum (natural fat covering of the abdomen), and drains were placed for recovery.

Post-operatively, she required advanced care including imaging (CT scans, X-rays), endoscopic procedures (camera-based internal checks), fistula clipping (closing abnormal passages), and pleural effusion drainage (removing fluid around lungs). Persistent infections, including Candida auris (drug-resistant fungal infection), were treated with guidance from Dr. Pankaj Dhawan, Consultant Gastroenterology, and Dr. Mala Kaneria, Consultant Infectious Diseases. Blood transfusions, albumin therapy (protein supplementation), and cardiology input for arrhythmias (irregular heartbeats) were provided until she stabilised and resumed oral intake. The patient was admitted for 64 days, battling between life and death, before finally recovering.

Dr. Sanjay Borude Bariatric Surgeon, Jaslok Hospital and Research Centre - "When I first examined the patient, her abdomen was in a very critical state, with severe infection, adhesions, and pus collections around the operated area. Each step of the surgery was high-risk and required precise judgment to clean the infection and repair the gastric perforation safely. We reinforced the weak area and closed it carefully in layers to avoid further leaks. Seeing her gradually stabilise and regain strength has been very rewarding. I'm especially thankful to Dr. Rahul Borude and Dr. Jaydeep Palep for their invaluable support throughout the procedure."

Exceptional Cases

Dr. Pinank Pandya, Chief Intensivist, Jaslok Hospital and Research Centre, said, "This case was extremely complex from the outset, as the patient was already in critical condition with multiple organ complications. Our primary focus was to stabilise her respiratory and hemodynamic status while coordinating with various specialties to manage infections, nutrition, and wound care. The success of this case lies in seamless teamwork, rapid decision-making, and continuous monitoring, which ultimately enabled us to bring the patient back from a life-threatening situation."

Dr. Milind Khadke, Chief Medical Officer, Jaslok Hospital and Research Centre - "This was one of the most challenging post-bariatric cases we have encountered in recent years. The patient arrived with life-threatening leaks, widely gaping surgical wound, and persistent infections, requiring immediate, coordinated intervention. Every decision, from stabilising critical complications to guiding her through post-operative recovery, demanded vigilance, precision, and seamless teamwork across multiple specialties. Successfully navigating this case demonstrates Jaslok Hospital's expertise in managing rare, high-risk emergencies with structured, multidisciplinary care tailored to each patient's needs."

Mr. Manoj Mehta (Name Changed), Patient's husband. - "When we lost hope, we called Dr. Sanjay Borude and he guided us through the whole journey. I had lost hope of seeing her alive, but the doctors, nurses, and everyone at Jaslok worked like one robust team. They not only brought my wife back to life but also cared for her like one big family. I really thank Dr. Borude for saving my wife."

सर्जरी के बाद जानलेवा जटिलताओं से जूझ रहे मरीज को मिली नई जिंदगी

मुंबई। जसलोक अस्पताल एवं रीसर्च सेंटर ने 49 वर्षीय महिला, श्रीमती रेखा मेहता (बदला हुआ नाम) का सफलतापूर्वक इलाज किया है, जिन्हें बेरियाट्रिक सर्जरी के बाद गंभीर और जानलेवा जटिलताएँ हुई थीं। उन्हें बेहद गंभीर हालत में भर्ती कराया गया था और जसलोक की सुपर-मल्टी-स्पेशलिटी टीम ने समय पर और समन्वित निर्णयों के साथ उनके मामले का प्रबंधन किया।

फरवरी 2025 में, मरीज ने अहमदाबाद में बेरियाट्रिक सर्जरी करवाई। तीन महीने बाद, उन्हें गंभीर जटिलताएँ हुईं और उन्हें आपातकालीन उपचार के लिए नवी मुंबई के दो अलग-अलग अस्पतालों में भर्ती कराया गया, जहाँ गैस्ट्रो-जेजुनोस्टॉमी अलसर (पेट और छोटी आंत के बीच एक छेद) के लिए उनकी आपातकालीन लैपरोटॉमी (पेट को खोलने और उसकी जाँच करने के लिए पेट की सर्जरी) की गई। उसकी हालत और बिगड़ती गई और एक्यूट रीनल फेल्योर (अचानक किडनी फेल होना) और दिल का दौरा पड़ने से उसकी हालत और भी जटिल हो गई।

सर्जरी के बाद जानलेवा जटिलताओं से जूझ रहे मरीज को मिली नई जिंदगी

मुंबई। जसलोक अस्पताल एवं रीसर्च सेंटर ने 49 वर्षीय महिला (बदला हुआ नाम - रेखा मेहता) को सफलतापूर्वक नया जीवन दिया है। अहमदाबाद में हुई बेरियाट्रिक सर्जरी के बाद उन्हें गंभीर जटिलताएँ हो गई थीं और हालत इतनी बिगड़ गई थी कि नवी मुंबई के दो अस्पतालों में इमरजेंसी सर्जरी करनी पड़ी। इसके बावजूद एक्यूट रीनल फेल्योर और दिल का दौरा पड़ने से स्थिति नाजुक होती गई।

मरीज को मई 2025 में जसलोक लाया गया, जहाँ उन्हें वेंटिलेटरी सपोर्ट, आई-फ्लो ऑक्सीजन और इंटीनसिव निगरानी में रखा गया। चौफ इंटेंसिव डॉ. पिनांक पंड्या और टीम ने संक्रमण नियंत्रण, पोषण सपोर्ट और खरोंहट मैनेजमेंट के जरिए उन्हें स्थिर किया। इसके बाद डॉ. संजय बोरडे के नेतृत्व में डॉ. पहलु बोरडे और डॉ. जयदीप फलेप ने गैस्ट्रिक फॉरेशन को

मरम्मत कर जटिल सर्जरी की। ऑपरेशन के बाद भी मरीज को कई चुनौतियों से गुजरना पड़ा—जैसे लोंगी स्टेन, एंटीबियोथे, फिस्टुला विलिंग, प्ल्यूरल इम्ब्रूशन ड्रेनेज और बैडिडल ऑरिस जैसे ड्रग-रिजिस्टर्ड फोनल इन्फेक्शन का इलाज। धीरे-धीरे हालत सुधरने लगी और 64 दिन के लंबे उपचार के बाद मरीज पूरी तरह स्वस्थ होकर घर लौट पाई।

डॉ. संजय बोरडे ने कहा, यह केस बेहद जटिल था। पेट के छिद्र को मरम्मत में हर कदम पर सावधानी जरूरी थी। टीम बर्क और लहरिन फैसलों ने मरीज को बचाया। डॉ. पिनांक पंड्या ने कहा, हमारा प्राथमिक लक्ष्य मरीज को स्वस्थ और हृदय संबंधी स्थिति को स्थिर करना था। विभिन्न विशेषज्ञों के समन्वय ने इस केस को सफल बनाया। मुख्य चिकित्सा अधिकारी डॉ. मिलिंद खडके ने कहा, यह हमारे लिए सबसे चुनौतीपूर्ण मामलों में से एक था। इस सफलता ने जसलोक अस्पताल को मल्टी-स्पेशलिटी विशेषज्ञता को साबित किया है। मरीज के पति ने कहा, हमने उम्मीद छोड़ दी थी, लेकिन जसलोक की टीम ने मेरी पत्नी को नई जिंदगी दी। हम हमेशा आभारी रहेंगे।

चिमुकल्याच्या फुफ्फुसात अडकला बल्ब

म. टा. विशेष प्रतिनिधी, मुंबई

खासगी रुग्णालयात यशस्वी उपचार

मेल्व तीन महिन्यांपासून माडेनेत्रेन वर्षाच्या राहुलला खोकला आणि श्वसनाचा त्रास होता. अनेक प्रकारचे औषधे आणि प्रतिबंधिके दिल्यानंतरही त्याचा त्रास कमी झाला नाही. उत्तम उत्तरीतर त्रस्तात काढव होत गेले. अखेरचा पुढील उपचारसाठी मुंबईला नेण्यात झाले राहुलला फाल्गुन देण्यात आला. मुंबईतील खासगी रुग्णालयात राहुलला सर्जरी करून काढव आला. त्यात त्याच्या छात्र्या खोकलामध्ये (फुफ्फुसात) बल्ब नेण्याचा टोन मॅलिकॅरिस्टी एच) धातूचा तुकडा असल्याचे निष्पन्न झाले.

राहुलची जीवोद्योगीय कारणता आन्वयानंतर त्याच्या डॉकसमध्ये स्तून बसलेला धातूचा तुकडा एल्युमिनीय काल्क असल्याचे स्पष्ट झाले. डॉ. विमल वसंत आणि डॉ. दिव्य प्रभात यांनी राहुलची कोरोनॉयचे केली. त्यात खेळण्यातील बडोदा अनावधानाने

गिळलेला एल्युमिनीय काल्क काढण्यात डॉक्टरांना यश आले. त्यानंतर राहुलच्या फुफ्फुसांचे कार्य पूर्ववत होऊन त्याचा खोकला आणि श्वसनाचा त्रास दूर झाले. बडोदा बूलवत डॉ. अनुपम जैन यांची राहुलची कोरोनॉयचे केली. त्यात खेळण्यातील बडोदा अनावधानाने

मुलांनी एखादी वस्तू गिळणे हे पालकांच्या लक्षात न घेणे स्वाभाविक आहे. मात्र, योग्यवेळी लक्ष दिल्यास यामुद्भातीत तक्रारी टाळता येतात. तीन महिने मुलाचे पालक अत्यंत तणावग्रामध्ये होते. त्यांना वेगळे काय करावे हे स्पष्ट होत नव्हते. तज्ञ डॉक्टरांमुळे मुलाला जीवनदान मिळाले.

- डॉ. मिलिंद खाडके, प्रमुख वैद्यकीय अधिकारी

Indian generics wave next year set to sink obesity drug price

ETPrime

Synopsis: Leading Indian drugmakers are preparing to launch generic versions of semaglutide by March. Analysts predict a significant price drop, potentially up to 80%. This will make the drug more accessible to obese and diabetic patients. The domestic, weight-loss drug market is expected to grow substantially. Semaglutide patent expiry will trigger price erosion and increased adoption.

सफलता | जसलोक अस्पताल के डॉक्टरों ने दी नई जिंदगी बच्चे के फेफड़े से निकाला LED बल्ब

दुर्लभ और जटिल सर्जरी की गई

■ मुंबई, नवभारत न्यूज नेटवर्क, मुंबई के जसलोक हॉस्पिटल एंड रिसर्च सेंटर के डॉक्टरों ने एक 3.5 साल के मामूम की जिंदगी बचाते हुए दुर्लभ और जटिल सर्जरी को अंजाम दिया. तीन महीने से लगातार खांसी और सांस लेने में तकलीफ झेल रहे इस बच्चे के फेफड़े से डॉक्टरों ने सफलतापूर्वक एक धातु का एल्यूमीनियम बल्ब बाहर निकाला. यह बल्ब दरअसल खिलौना गाड़ी से टूटकर बच्चे के बाएं ब्रॉन्कस में फंस गया था. शुरुआती जांच में इसे बार-बार होने वाला न्यूमोनिया समझकर एंटीबायोटिक दी गई, लेकिन कोई फायदा नहीं हुआ. बाद में सीटी स्कैन से चौंकर चर्ची सच्चाई सामने आई. इससे पहले कोलकाता में फ्लोरिडबल ओन्कोसकोपी की कोशिश नाकाम रही. तब परिजनों ने बच्चे को जसलोक हॉस्पिटल में भर्ती कराया.

यहां विशेषज्ञ टीम ने सिर्फ 4 सेन्टीमीटर का चोरा लगाकर मिनी थ्रोथ्रोमोमी सर्जरी के जरिये बल्ब निकालकर बच्चे की सांस की तकलीफ दूर की.

क्या कहते हैं विशेषज्ञ?

“यह हमारे करियर का सबसे दुर्लभ मामला था. एल्यूमीनियम बल्ब फेफड़े के टिश्यू में धंस चुका था और सामान्य तकनीकों से निकालना संभव नहीं था. सावधानीपूर्वक योजना के बाद मिनी थ्रोथ्रोमोमी के जरिये इसे सुरक्षित रूप से निचला गया.”

— डॉ. विवेक राजपूत, थोरोसिक सर्जन

“बच्चे में लंबे समय तक खांसी या सांस की दिक्कत को हलके में न लें. यह कई बार बढ़ती वस्तु फंसने की संकेत से भी हो सकती है. समय पर सीटी स्कैन जैसी जांच जीवन बचा सकती है.”

— डॉ. शिव प्रसाद, इंटरनीट सर्जन

“बच्चे में बढ़ती वस्तु गले या सांस की नली में फंसना आम है. समय पर इलाज से गंभीर खतरों से बचा जा सकता है. यह केस पैरेन्ट्स और डॉक्टरों दोनों के लिए रोशनी है.”

— डॉ. मितिवि खड्गे, सीएचएमडी, जसलोक हॉस्पिटल

Woman, pregnant with twins, survives 18-hour heart surgery

Usha Kalyanikar @timesofindia.com

Mumbai: A 31-year-old woman, eight months pregnant with twins, was rushed to KEM Hospital for intense chest pain radiating down her spine, and breathlessness. Doctors found a tear in the main blood vessel that carries blood from the heart to the rest of the body. But delays in diagnosis and treatment cost nearly a day and fearing the loss of all three lives, the family moved her to a private hospital.

The mother, Tejashini Hirani, and her two preterm daughters remained at Jaslok Hospital for a month. The total expenses reached around Rs 30 lakh, covering an emergency caesarean, an open-heart surgery, and a month-long admission for all three. The twins turned two months old on Sunday.

“At KEM, I was told the costs could be Rs 4 lakh, but the risks seemed too high and we had lost trust,” said Nishant Hirani, the twins’ father. The family lives in Rumbhai Ambekar Nagar in Gharkopar. “We had to borrow from friends and family all our savings are exhausted, but at least all three are alive and safe,” Hirani said.

A doctor from KEM Hospital said, “They took discharge against medical advice. It was a high-risk case with low survival chances, but we were prepared to operate. In the end, it was the patient’s choice.” Car-

WHAT IS MARFAN SYNDROME

► A genetic disorder affecting the body’s connective tissue
► Connective tissue provides strength and flexibility to many structures in the body
► So the syndrome can affect multiple parts, including heart, eyes, and even bones
► Those with the disorder have common traits, which include being tall and thin build, having long arms, legs, fingers or elastic skin

Cardiological risks
► Almost all Marfan patients have cardiac issues
► The heart valves often don’t close properly causing blood to leak
► There is either enlargement or dilation of aorta that connects heart to rest of the body

she had to be put on ventilator. Eventually, there were more complications impacting almost her entire body,” he said. The open heart surgery lasted 18 hours. By the time Tejashini reached Jaslok, doctors were unable to detect the heartbeat of one of the babies, prompting an emergency C-section.

“Marfan syndrome is risky even outside pregnancy, but during pregnancy, the risk to the mother’s life is far more. The most dangerous part is that cardiac complications can strike at any time from the first day to just after delivery,” said Dr. Umesh Lalwani, the gynaecologist who performed the delivery.

Hirani said Tejashini is still recovering, while the twins are healthy. “She will have to be on lifelong blood thinners. This is likely the first such survival case in the world, given that maternal mortality in such situations can be as high as 60%, and infant mortality even higher,” said Dr. Pathare.
